## VOL． 25 FALL 2016

## Apartment Report

## THE TEPID APARTMENT MARKET

## Craig McConachie，CछRR Real Estate Services，Co． Apartment Report Committee

Maybe not red hot anymore，but moderately warm，would be a good description of our current apartment market．Landlords and developers are continuing their best efforts to meet the growing demand for housing，as political pressure mounts to alleviate the ＂housing emergency．＂Approximately 3，000 units have been delivered in the Portland MSA in just the last six months，with another 10,000 units under construction．That doesn＇t include another 28，000 units in the proposed pipeline！As the housing supply increases， vacancies are rising and rent escalations are slowing．

A more balanced market between supply and demand is starting to have an impact and the hot apartment market is cooling．The Portland area continues to experience strong job growth along with robust wage and household income gains．While new units continue to be delivered，demand is staying steady，aided by in－migration，a very tight labor market， and a regional economy that is approaching full employment．

Demand to purchase apartments remains high，and inventory is still low．The number of closed transactions in the Metro area stayed steady in the first two quarters of 2016 at 99 and 98 respectively．Median price per unit is now over $\$ 100,000$ ，with average price per unit approximately $\$ 147,000$ ．Cap rates for third quarter transactions are trending under 6\％．

Our Fall report has had the most participation of any previous report，with over 70，800 units at 1，065 properties surveyed．As always，properties with less than five units and projects that are in lease－up，and have not reached stability，are excluded．

## Portland／Vancouver VACANCY：

The Portland／Vancouver vacancy factor continues to increase from its low of last fall $(2.9 \%)$ and currently stands at $\mathbf{3 . 7 1 \%}$ ．The East Vancouver area has the lowest vacancy of $2.2 \%$ ，followed by Troutdale at $2.4 \%$ ，and Tigard at 2．5\％．Northwest Portland has the highest vacancy factor of $5.4 \%$ ，with Oregon City and Downtown pushing close to $5 \%$ ． An abundance of newly built studio units has resulted in studios having the highest vacancy rate among all unit types of $4.9 \%$ ． Three－bedroom，one bath units have the best occupancy of all unit types，with average vacancy of $2.9 \%$ ．The softening market is widespread．Of the twenty areas included in our survey，only five experienced a reduction in vacancy，while fifteen areas had increased vacancy factors．The Metro area is experiencing a flight to affordability，as occupancy remains strongest in areas where rents are lowest．

## RENT RATES：

Overall rents in the Metro area have seen an increase of $\mathbf{1 0 . 5 \%}$ year over year．Troutdale and Outer Northeast are two areas with the most aggressive increases，and are also areas with lower overall rent rates．Approximately $14 \%$ of the surveyed units have been built in the last ten years，with over $54 \%$ of the units built between 1966 and 1980．The increasing proportion of new units in our survey has caused average rent rates to increase disproportionately compared to older，more seasoned product．

Average rent per sq．ft．for all areas has increased to $\$ 1.47$ ．The Downtown core continues to have the highest rents at $\$ 2.30$ psf．，with NW Portland coming in second at $\$ 2.11 \mathrm{psf}$ ．Outer NE Portland and East and West Vancouver have the lowest rates，at $\$ 1.14, \$ 1.17$ and $\$ 1.20$ psf respectively．

## Overall average rents per unit type Portland MSA：

MARKET CONDITIONS：
Only $3 \%$ of all stabilized properties are offering rental incentives．The average number of days that a unit will stay vacant for the entire Portland area is 28，down from 39 days six months ago．Inner SE Portland is the only area that is still experiencing exceptionally fast turnover times，with an average of 11 days in down time between tenants．

## Other Areas

The Eugene／Springfield market has seen occupancy improve，with a vacancy factor now less than $3 \%$ ，but rents have remained stagnant． Vacancy rates have also improved in Bend and stand at $2.6 \%$ ，with rents escalating at an $8.5 \%$ annual rate．The Salem market continues to experience vacancy levels under $3 \%$ ，with rents finally showing some increases．The Bend，Eugene and Salem areas all report average number of days that a unit will stay vacant between 22 and 27 days． This is slightly lower than the Portland MSA of 28 days．

## Our Contributors

Patrick Barry，with Barry \＆Associates，has once again contributed their detailed Apartment Construction Report．Portland＇s current development pipeline includes a record 28,000 proposed units that may follow the 10,300 units currently under construction．He states that the current level of construction is meeting demand and expects vacancy rates to creep up．A majority of the new construction is in Multnomah County（close－in east and west Portland），with suburban construction still lagging，despite lower land values，low vacancies and increasing rents．

Josh Lehner，Economist with the State of Oregon，has contributed an article which examines the regional economy，wages，and employment trends．The Portland area median household income increased 6\％ in 2015，the largest gain in a decade．Josh describes the tightening labor market and its impact on employers．He also discusses how the millennials are shifting from apartment renting to home ownership． This is a subject that should be of particular interest to landlords．

Jordan Carter，with Kidder Matthews，has written an article from the broker＇s perspective．He points out that＂East County＂is drawing recent attention from investors and values are increasing．Jordan also touches on some political hot buttons including rent－control，no－cause notices
and inclusionary zoning．He writes that further restrictions on landlords will only serve to discourage new construction and property upgrades．
This survey represents a total of 82,454 units from 1173 properties （includes section 42）．All of the articles have been reprinted without editing the content，in order to present unbiased opinions．We＇d like to thank all of the management companies and property owners who have submitted information．Their participation is critical in insuring the accuracy of our data and the continued success of this report．

## PロRTLAND＇S ECロNロMIC ロபTLロロK CHANGED AS ECロNロMY REACHES FபLL EMPLロYMENT

```
Josh Lehner，Economist，State of Oregon，Office of Economic Analysis
```

The Portland metropolitan area＇s job growth and wage gains continue to outpace the typical metro across the nation．Such gains are also on par with growth seen during the height of the housing boom last decade．Importantly，the expansion has now reached the lowest income households and broader measures of well－being like the poverty rate．However，the outlook for an economy approaching full employment differs in important respects from one that is digging out from a recession．The tighter labor market brings good news for workers in the form of rising wages，different challenges for businesses looking to expand and shifts the calculus for households looking to buy or rent．

First the good news．Economic growth in recent years is finally impacting broader measures of economic well－being．Median household income in the Portland region increased six percent in 2015，the largest gain in a decade．However，after taking inflation into account，local incomes remain about one percent below their pre－Great Recession levels．That said，median household income in the typical large metro nationwide remains six percent below pre－Great Recession levels．
Even as the lowest income households have suffered the largest declines in the past decade，the recovery is finally starting to reach them．Nationally and across Oregon，such households saw the largest income gains last year，at least in percentage terms． This welcome news resulted in a correspondingly large decline in the poverty rate．These improvements are seen in the Portland region among households in deep poverty，those with incomes less than half the official poverty level．Furthermore，poverty in Portland has improved proportionately for both whites and people of color alike．
The driving force behind these improvements is the strong labor market．Employment in the Portland region is not only considerably higher than back in 2008，but it has fully caught back up with population growth over the same period．The labor market is getting tight．As the pool of available workers shrinks，
businesses must compete more on price to attract and retain the best employees．This is great news for workers as wages rise．Given that wages make up the majority of income for households at the bottom，such wage gains are pulling workers and families out of poverty today．Higher－income households have a wider variety of income sources besides wages，such as capital gains，dividends and the like．
The tight labor market does mean businesses looking to expand must cast a wider net to find workers．This includes potential hires that may not have been looking in the first place．Examples include stay－at－home parents， early retirees or discouraged workers who have previously given up looking． With the right opportunity，such workers move directly into employment， bypassing the job search phase entirely．Additionally，businesses can no longer be as picky in hiring the perfect candidate．Firms must take chances on workers without the ideal experience or a potentially incomplete skill set．On－the－job training becomes considerably more important．

The outlook for an economy at full employment differs in that net growth rates are expected to slow，but for a good reason．Statewide，job gains in recent years are more than twice as much needed to keep pace with the growing population．This is welcome news during a recovery and the large gains eat up the economic slack．However，such gains are not sustainable over the long－term；they are peak growth rates．As the economy approaches and reaches full employment，job growth is expected to slow to a sustainable rate，more in line with the working－age population．

Finally，the combination of a strong regional economy and the Millennials beginning to age into their mid－and late－20s，does mean the Portland metro is at peak renter．Homeownership across the region increased in 2015 with the largest gains among the 20 －and 30 －something households．While expectations are not for a return to mid－2000s ownership rates，the large shift into rentals over the past decade is likely finished．That said，in a growing metropolitan area like Portland，the overall number of renters and owners will both increase．The challenge is ensuring the housing supply keeps pace with demand．This has not happened in recent years and affordability has eroded．

Josh Lehner is a Senior Economist with the State of Oregon＇s Office of Economic Analysis．He develops the quarterly Oregon Economic forecast，including outlooks for employment，income and housing．Additional responsibilities include the Oregon Index of Leading Indicators，tracking international developments in Oregon＇s＇export markets and forecasting revenues for the Oregon Lottery， Oregon Judicial Department and state tobacco taxes．Mr．Lebner earned a B．A．in Economics from the University of Colorado and an M．S．in Economics from Portland State University．

Apartment permit activity and construction starts have increased over the past six months．Since this report was last published in the Spring of 2016，our records show that around 3，000 units have been completed．In that same time frame，construction began on another 4,200 units，thus outpacing completions．We estimate that around 10,300 units are currently under construction，which is up from 9，200 units six months ago．Another 25，600 units are proposed，which is up from 21，500 units six months ago． The number of proposed units is likely closer to 28，000 when you consider that 44 of the proposed projects have not announced the number of units．

CURRENT UNITS UNDER CONSTRUCTIロN AND PRロPロSED BY LロCATIロN

Apartment construction in the Inner-East, Inner-West, and North Portland submarkets has remained exceptionally strong. Increases in land values have done little to push construction outside the core, as strong margins remain between cost and value. There have been some increases in suburban construction, though the increases are minimal. As urban land values continue to increase, developers may look to suburban locations. However, suburban construction has remained slow throughout this cycle, despite low vacancies and increasing rents.

PRロJECTS UNDER CロNSTRUCTIロN
The table below includes most projects under construction．Due to space constraints，we were unable to publish the units recently completed or proposed．The full list of projects is available under the＂Reports＂section of our website www．barryapartmentreport．com．

With recent increases in the pace of construction, we expect the overall vacancy rates to creep up. However, we do not expect vacancy rates to approach $5 \%$ for at least $12-18$ months and possibly longer. Over the next 24 months, we expect a total of 12,000 to 16,000 new units to become available. The current levels of construction are meeting the new demand and should start bringing the vacancy rates to levels more in balance. $\square$

[^0]
## MULTIFAMILY SALES REMAIN ACTIVE IN $2 \square 16$

Despite rumblings for a couple years that Portland's apartment market has peaked or is close to peaking, market fundamentals remain strong. Investors continue to pile capital into new deals, fueled by regionally affordable pricing, cheap financing and the area's tremendous long-term potential.

## APARTMENT SALES: 2016 VS. 2015

By annualizing at CoStar sales data for $5+$ units through September 2016, this year is on track for 364 sales compared to 385 in 2015. Sales volume in dollars is projected around $\$ 2.1$ billion, just short of the $\$ 2.6$ billion in 2015, but well above 2014's $\$ 1.6$ billion. Other primary value indicators project higher for 2016 vs. 2015, including the average price-per-unit at $\$ 146,000$ vs $\$ 142,000$ and average price-per-SF at $\$ 154$ vs. $\$ 152$. While CoStar only reports cap rates on about half of its transactions, the average for 2016 has declined to $5.83 \%$ from $6.01 \%$ in 2015.

Institutional sales (over $\$ 15$ million) hit a high watermark in 2015 with 50 sales totaling just over $\$ 1.8$ billion. Annualizing for 2016, 36 total institutional sales are projected at $\$ 1.3$ billion, which marks another strong year. Both the average price-per-unit and average price-per-SF are up from 2015 at $\$ 199,000$ vs. $\$ 177,000$ and $\$ 192$ vs. $\$ 182$, respectively. Cap rates remain near historic lows, most transacting in the $4-5 \%$ range based on in-place numbers. Financing options remain aplenty for institutional investors, but many institutional underwriters are becoming more conservative on annual rent growth projections.

Private capital sales (under $\$ 15$ million) have nearly kept up with 2015's feverish pace. Projected sales for 2016 should be close to last year's total of 335 private capital sales, with volume up slightly at $\$ 800$ million compared to $\$ 792$ million in 2015 . The average price-per-unit for 2016 is up to $\$ 101,500$ vs. $\$ 97,000$ in 2015, and average price-per-SF is up to $\$ 117$ from $\$ 110$. Cap rates on private capital sales have decreased 23 basis points this year to $5.93 \%$ on average.

## IN THE TRENCHES:

Talk to brokers and investors and the common theme you'll hear is there's far more buyers than sellers, and brokers can't dig up enough inventory to satisfy demand. Despite the fact that the total number of transactions in 2015 are 32\% higher than 2014's previous high, and this year looks to be nearly as active as 2015, supply remains the primary issue because there isn't enough inventory to satisfy an increasing number of investors.

Outer east Portland and Gresham are prime examples of submarkets benefiting from the supply/demand conundrum, especially over the last 12 months. While overlooked by some investors in the past, demographic shifts and market conditions have accelerated rent growth, creating "value-add" opportunities for out-of-state investors who often don't carry preconceived notions of the area. Today, "East-County" is drawing more investor attention than in recent memory, driving cap rates down and values up.

Who are these investors and where are they from? Over the last two years, nearly $90 \%$ of all acquisitions have been made by investors from two states - Oregon and California. Oregonians account for between 60-65\% of all acquisitions and Californians roughly $25-30 \%$. My team has experienced an even more dramatic influx, with 10 of our 22 apartment sales in 2016 being acquired by Californians, and 12 by Oregon/SW Washington based investors.

Why do so many Californians come to Portland to invest? The simple answer is that while we think our market is expensive, their market is even more expensive. Many are selling properties at 2-4\% cap rates, often in rent controlled areas. So finding a $4-5 \%$ cap rate opportunity in Portland with more units and actual rental upside makes common economic sense. Many experienced California investors also view Portland as a market just now coming into its own, something they've seen firsthand across many of their hometown cities. As such, while the current state of Portland's rapid growth, rising rents and values have been a shock for many local investors, Californians look to Portland's future and see long-term upside that lies ahead.

## POTENTIAL ISSUES MOVING FORWARD:

Rent Control: The latest hot topic in local politics is the "housing crisis" in our state, and more particularly, in Portland. We saw the city of Portland take action toward the end of 2015 when it bucked state law and extended the notice required to evict without cause and for certain rent increases. While it appears the State Legislature is gearing up to take the issue on in 2017, the jury is still out as to what, if any, measures may be imposed, and when. While it seems unconscionable to many that significant measures will be imposed, such as a moratorium on raising rents or completely eliminating no-cause evictions, Portland has a reputation for putting the cart before the horse when it comes to short-term fixes for long-term problems. Inclusionary zoning is another byproduct of the rent control debate. Portland policy makers are actively looking at ways to implement this controversial tool, which seeks to link affordable housing to the production of market-rate housing by requiring new developments to include a certain percentage of affordable units. One thing is clear - further restrictions, if imposed, will impact new construction of multifamily projects that Portland desperately needs. And this is the fundamental issue behind the housing shortage. Beyond that, it will discourage current landlords from improving their existing buildings and inflate rents on unregulated buildings.

Interest Rates: The question of whether and when interest rates will rise and its corresponding impact on cap rates has been the elephant in the room for a few years now. While signs point to the feds slowly easing rates up over the next couple years, even once they do become more "normalized," expect the new equilibrium to remain at lower rates than in the past.

New Construction: Yes, Portland has seen a recent boom in new construction, primarily in close-in locations. However, even with all the newly built and proposed units coming online through 2017, Portland should still remain at a negative absorption given the overall lack of supply and strong demand. This is especially true on " B " and " C " apartments, which are not what's being built. A slowdown in rent projections and lease-up of new construction could have a trickle-down effect, but it's doubtful in the near future, if at all, to have a material impact on the traditional " B " and "C" apartment properties that dominate our market.

## CONCLUSION:

Rent growth and skyrocketing values have made the last couple of years very good for owners. As equity in owner existing properties continues to grow, many are being pushed to look for more ways to capitalize, creating the fuel that drives an active sales market. To be sure, Portland has gone from a small town to a growing city in a short time, and with that growth come some inevitable growing pains. The next year should prove to be an interesting one for apartment owners and everyone in the industry!

Jordan Carter, JD is a First Vice President and Partner with Kidder Matherws, one of the largest independent commercial real estate firms on the West Coast. In the last two years, Jordan and his team have closed over $\$ 200$ million in multifamily transactions across Oregon/Washington. He can be reached at 503-221-2280 or by email at jcarter@kiddermathews.com.
